# Jeans are easy to explain

- they are made from denim
- they are hardwearing
- they protect your knees if you fall over

# Genes are a little bit harder to explain

Every part of your body is made out of cells:

Your hair

Your skin

Your finger and toe nails

Your bones

Your muscles

Everything!

# If you could crack open a tiny cell

You would find the genes. Genes make us all different and that's why genes make us all special. We get our genes from our families.

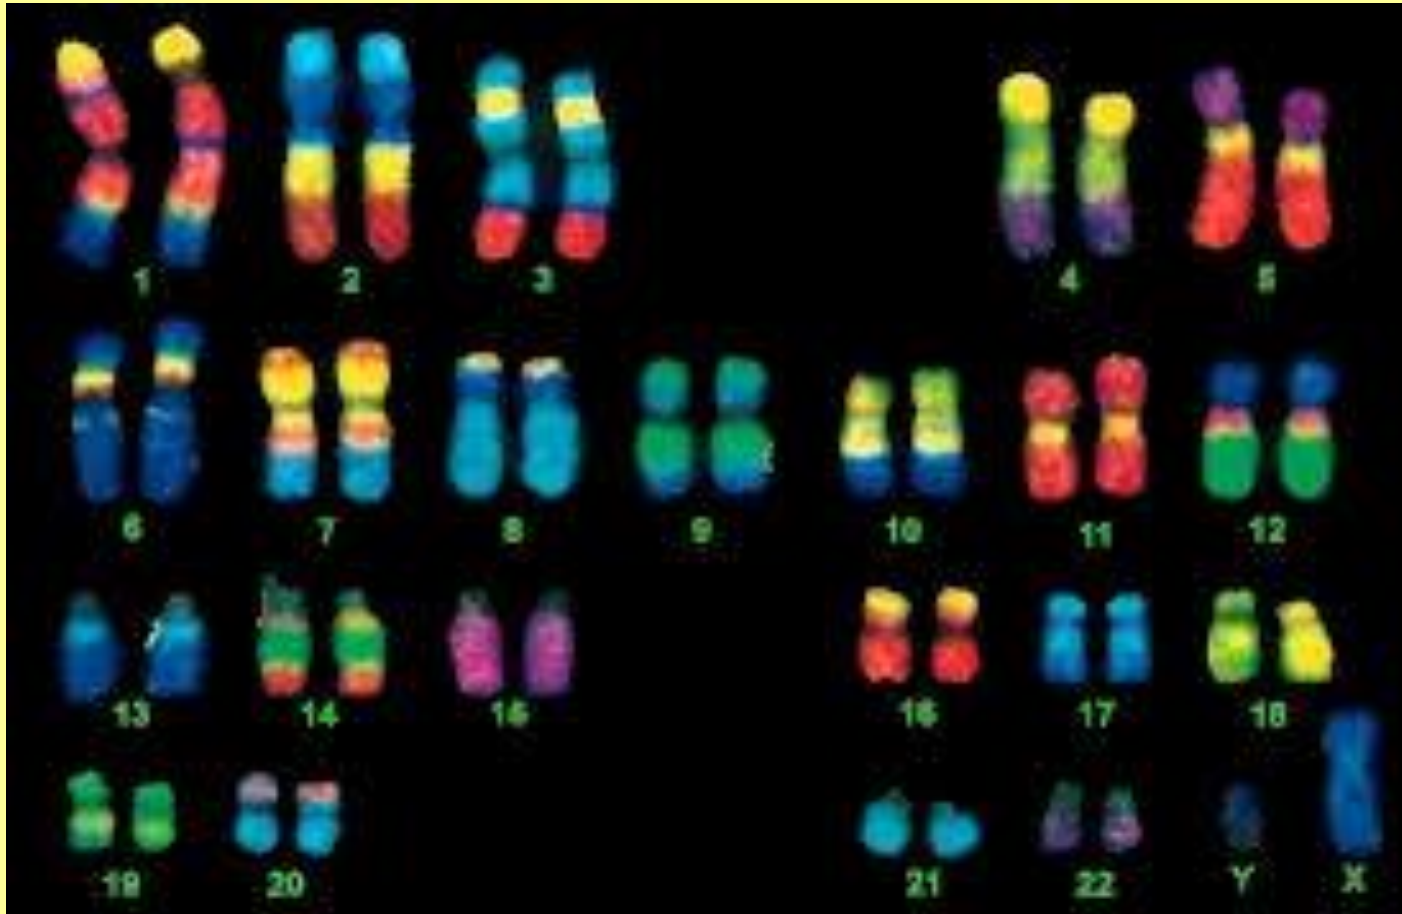

# Genes are a bit like a recipe

They go together in different combinations which makes us all special, all different, all unique.

# And then there are chromosomes

# One extra chromosome

# Did you know?

1 in every 1000 babies is born with

Downs Syndrome

and

60,000 people in the UK have

Downs Syndrome

# Important .....

Don't be afraid to say  
the wrong thing about  
Down syndrome.

# Next Wednesday
